(Stock Code: 3600)

VOLUNTARY DISCLOSURE
2026 THIRD QUARTER UPDATE

The Board is pleased to provide a voluntary disclosure and update on selected unaudited operational data of the Group for the nine months ended 30 September 2026.

AN UPDATE ON THE GROUP

During the nine months ended 30 September 2026, the Group's multi-dimensional strategies as supported by the ongoing trend of digitalization in the dental industry have resulted in the Group reporting record revenue during this period. This occurred in a period of challenging macro-economic environment with general softness in demand for dental procedures, trade war and geopolitical uncertainties. The Group has been proactive in its approach to deal with the unprecedented international trade environment leveraging its international production facilities located in Thailand, Vietnam and Mainland China.

The global digitalization trend continues to drive consolidation within the dental prosthetics industry, enabling the Group to further expand its market share. Our ongoing digital transformation initiatives are enhancing both customer and patient experiences while improving operational efficiency, further differentiating the Group from competitors and positioning us to outperform industry peers.

The Group's underlying fundamentals remain solid, and we are well positioned to capitalize on emerging opportunities going forward.

GLOBAL REVENUE

For the nine months ended 30 September 2026, the total revenue of the Group increased by approximately 9.3% (approx. HK$3,009.0 million) compared with the nine months ended 30 September 2025 (approx. HK$2,752.4 million).

	Nine months ended 30 September 2026	**Nine months ended 30 September 2025**	**Nine months ended 2026 vs 2025**	
	HK$'m	*HK$'m*	*Change in Currency*	*Original currency growth rate*
Europe	1,577.6	1,365.5	+4.2%	+10.9%
North America	496.8	534.4	—	-7.0%^
Greater China	466.3	455.0	+5.0%	#
Australia	250.6	215.0	+10.1%	+5.8%
Others	217.7	182.5	—	+19.3%++
	3,009.0	2,752.4		

^ *The increase in revenue in original currency of the North America market (ex-MicroDental) was approximately 3.4% and the decrease in revenue in original currency of MicroDental was approximately 10.3%.*

The increase in revenue in original currency of the Mainland China market was approximately 2.7% and the decrease in revenue in original currency of Hong Kong market was approximately 7.9%.

++ *The percentage change in Others represented changes in value of Hong Kong Dollars as Others included revenue dominated in different currencies.*

* *The revenue information above is based on the locations of the customers.*

** *The conversion rate shall not be taken as a representation that respective original currency could actually be converted into HK$ at that rate, or at all.*

The increase in revenue in Europe was primarily driven by higher sales order volumes, supported by the successful launch of new products such as digital dentures and the rollout of our state-of-the-art digital workflows. As a frontrunner in providing comprehensive digital solutions — ranging from minimally invasive and aesthetic prosthetic solutions to intra-oral scanners and clear aligners — the Group is well positioned to capitalize on the accelerated digitalization trend within the dental industry.

Revenue from MicroDental, our North American domestic dental laboratory business, declined due to the softer US economy, which led to reduced patient demand for high-value discretionary dental treatments, particularly implants.

The Group's revenue in the Mainland China market recorded 2.7% increase in original currency terms during the nine months ended 30 September 2026, representing a turnaround from the decline of 4.2% in 2025. The decrease in revenue in the Hong Kong market also narrowed to 7.9%, as compared to the decline of 11.5% in 2025.

The Mainland China market appears to have reached the bottom of the impact from the volume-based procurement policies and a prolonged period of intense price competition. This has also led to aggressive promotions for dental implant treatments by Mainland China dental clinics in Hong Kong, which experienced a notable decrease in patient visits. The Hong Kong market is gradually moving towards stabilization in line with this trend. The Group has deliberately pivoted away from low-margin segments and remains focused on serving mid- and high-value customers, thereby ensuring the long-term sustainable profitability of the Group's business.

The increase in revenue from Australia reflected a strong uptake of digital products driven by the digitalization trend in dental industry and anti-snoring products.

The increase in revenue in Others mainly represented the increase in revenue in Thailand, Singapore and Malaysia.

Notably, positive revenue growths were achieved in higher-margin regions such as Europe and Australia, whereas revenue declined in the relatively lower-margin business of MicroDental. This favorable geographical mix shift and the increase in the proportion of digital solution cases are expected to improve the Group's overall margin percentage.

Sales volumes (number of cases)

For the nine months ended 30 September 2026, the total sales volumes of the Group increased by approximately 5.5% to approximately 2,231,000 cases (nine months ended 30 September 2025: approximately 2,115,000 cases).

For the nine months ended 30 September 2026, the Group's digital solution cases (overseas and domestic) that are produced from its Mainland China, Thailand and Vietnam production facilities (which, for the avoidance of doubt, does not include digital solution cases produced in the Group's non-Mainland China, non-Thailand and non-Vietnam production facilities or overseas/satellite dental laboratories) increased to approximately 953,000 cases reflecting an increase of 27.1% for the same period in 2025 (approximately 750,000[#] cases) as a result of our clients' increased adoption of intra-oral scanners.

[#] *Volume of digital cases in 2025 is adjusted to align with the methodologies applied in 2026.*

Average selling price

For the nine months ended 30 September 2026, the average selling price of the Group's dental prosthetic products across its markets was HK$1,258 per case (nine months ended 30 September 2025: HK$1,227), representing an increase of approximately 2.5% mainly due to the appreciation of foreign currencies against Hong Kong Dollars.

Information in this announcement was based on the preliminary assessment of the Group's management accounts which had not been reviewed or audited by the auditors of the Company. The unaudited key operational data in this announcement should be read in conjunction with the Group's latest annual report and interim report. Shareholders and potential investors are advised to exercise caution when dealing in the Shares of the Company.
