The net proceeds from the Placing are intended to be used with: (i) 50%, or approximately HK\$115.4 million, for enhancing R&D of the advanced intelligent driving and automated driving and cockpit integrated solutions and products, (ii) 10%, or approximately HK\$23.1 million, for capital expenditure in relation to enhancing the R&D and manufacturing facilities, (iii) 15%, or approximately HK\$34.6 million, for the R&D, mergers and acquisitions of the Company's robotics business, and (iv) 25%, or approximately HK\$57.7 million, for working capital and general corporate purposes.

REASONS FOR AND BENEFITS OF THE PLACING

The Group is at a critical juncture of development opportunity, and the Placing will further provide funding assurance for the Group's continued robust growth. The trend of automotive manufacturers accelerating the deployment of intelligent driving technologies to mid-priced and low-priced vehicle models, known as "intelligent driving democratization (智駕平權)," creates a significant development window for the Group. Leveraging three core advantages – product cost-performance barriers, full-stack technology migration capabilities, and first-mover advantages in global certification – the Group will seize the initiative to accelerate the mass production ramp-up of mid-range intelligent driving solutions, support the delivery of new orders, and deepen its technological moat. Furthermore, the Company is proactively extending core technologies accumulated in the intelligent driving field (such as environmental perception, multi-sensor fusion, Simultaneous Localization and Mapping (SLAM), path planning, decision control, AI algorithms, etc.) to the robotics domain, urgently requiring capital investment to achieve commercial breakthroughs. The Group has established a professional team and has made preliminary positive progress in technical validation and prototype development for specific scenarios (such as industrial logistics Autonomous Mobile Robot (AMR) and service robot platforms). The robotics market has enormous potential but fierce competition, requiring large-scale, long-term investment from technology platform construction and product development to market promotion and ecosystem building. The Placing will provide strong financial support for the Group to seize strategic opportunities in developing its robotics business, further train and strengthen Vision Language Model (VLM)/ Vision Language Action (VLA) perception foundation models that can simultaneously empower both assisted driving and robotics applications, among other initiatives. Additionally, current investor interest and favorable market conditions enable the Group to obtain financing on competitive terms and improve capital efficiency, thereby reducing potential risks from future capital market volatility and regulatory uncertainty, which is beneficial to the Group's sustainable development.

The Directors have explored various options to raise capital and considered that the Placing represents the most suitable and efficient financing option for the Company to raise further funding to support the Group's continuous development and business growth, which is in the interest of the Company and its Shareholders as a whole.

The Directors (including the independent non-executive Directors) consider the terms of the Placing Agreement to be fair and reasonable in the interests of the Company and the Shareholders as a whole and that the Placing Agreement is entered into upon normal commercial terms following arm's length negotiations between the Company and the Placing Agents.

Completion of the Placing is subject to the satisfaction of the conditions precedent in the Placing Agreement, and therefore, the Placing may or may not proceed. Shareholders and potential investors are advised to exercise caution when dealing in the H Shares.
