## **VOLUNTARY ANNOUNCEMENT UPDATE ON BUSINESS DEVELOPMENT – OBTAINING THE LETTER OF NOMINATION**

This announcement is made by iMotion Automotive Technology (Suzhou) Co., Ltd. (the “**Company**”, together with its subsidiaries, the “**Group**”) on a voluntary basis to keep the shareholders (“**Shareholders**”) and potential investors of the Company informed of the latest business development of the Group.

The board (the “**Board**”) of directors (the “**Directors**”, and each a “**Director**”) of the Company is pleased to announce that, the Company has recently obtained some letters of nomination and specifically announces two of them. First, the Company received a letter of nomination from an independent brand in South China (hereinafter referred to as the “**New Customer**”). The Company has been selected by the New Customer as a supplier of advanced driving assistance systems (“**ADAS**”) solutions for a certain mainstream mass-production vehicle model and will provide an ADAS domain controller solution based on Horizon Robotics’ Journey®6B (hereinafter referred to as “**J6B**”) chip. This product is also among the first designated Horizon Robotics J6B integrated parking-and-driving domain controllers developed by Horizon Robotics. Second, the Company received a letter of nomination from a leading new energy vehicle startup in Zhejiang. The Company will supply ADAS solutions for three of its overseas models, supporting these mass-production vehicles in complying with the EU’s General Safety Regulation (GSR) requirements and meeting the five-star safety rating under the E-NCAP 2026 standards. The first model of the three is scheduled for mass production in the first half of next year.

These nominations from the two customers signify that the Company’s research and development capabilities have been recognized by both new and existing customers, further consolidated and improved the Company’s market competitiveness and enhanced the Company’s market position in the field of new energy passenger vehicles, which is conducive to further promoting the Company’s market competitiveness and sustainable development capabilities in the future.

The Company will actively promote the above-mentioned research and development projects. Due to the risks and uncertainties in the research and development process of ADAS systems, the Company will actively work on product research and development. Meanwhile, the Company will strengthen risk management and control to minimise the risks that may arise from market fluctuations.

**Shareholders and potential investors are advised to exercise caution when dealing in the securities of the Company.**

By order of the Board  
**iMotion Automotive Technology (Suzhou) Co., Ltd.**  
**SONG Yang**  
*Chairman of the Board and Executive Director*
